MAGNETIZERS AND DEMAGNETIZERS

EHD-W205A

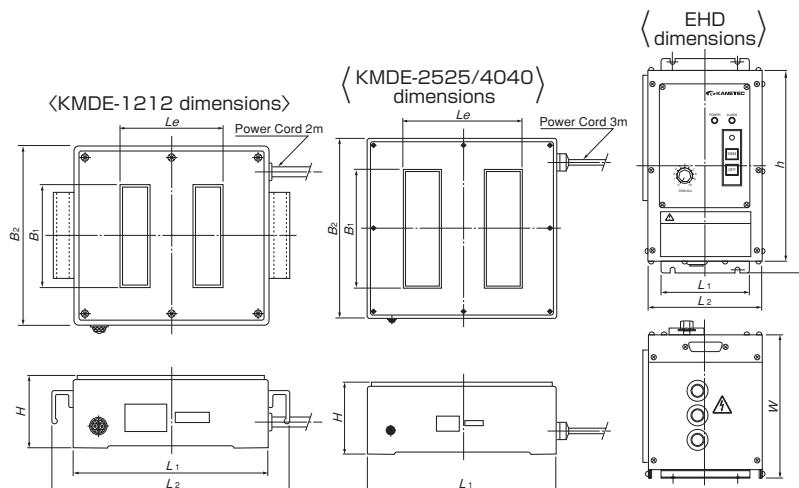

### [Application]

Pressing the demagnetizing button completes demagnetization within a fixed time without moving workpieces.

### [Features]

- A magnetomotive force greater than the AC demagnetizer has been set, which works well on hard workpieces such as bearing steels and cutter steels that are difficult to demagnetize with conventional demagnetizers.
- Since workpieces are demagnetized while keeping them stationary on the demagnetizer, it is not necessary to move workpieces as when using an AC demagnetizer. Thus, this model is suitable for demagnetization of large workpieces (e.g. molds) that are difficult to move.
- Since demagnetization is carried out according to the attenuation pattern programmed in the power unit, electricity needs to be applied only during demagnetization, saving electricity.
- The demagnetizer itself and the power unit are installed separately. Thus, they can be installed in an easy-to-operate place.

**A larger special demagnetizer is also available.**

## Model KMDE-MP SINGLE POLE STATIC TYPE DEMAGNETIZER

HIGH GRADE MAGNETIC SEPARATORS  
MEASURING INSTRUMENTS  
MAGNETIC MATERIALS

KMDE-MP1013

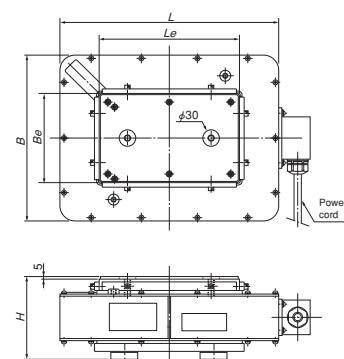

### [Application]

Recommended for demagnetization of thick workpieces and partial demagnetization of large workpieces.

Pressing the demagnetizing button completes demagnetization within a fixed time without moving workpieces.

### [Features]

- A strong magnetic field is generated in a wide area to make this model suitable for partial demagnetization of large workpieces and thick workpieces.
- Since demagnetization is carried out according to the attenuation pattern programmed in the power unit, electricity needs to be applied only during demagnetization, saving electricity.
- The demagnetizer itself and the power unit are installed separately. Thus, they can be installed in an easy-to-operate place.
