

Model HEM-C CIRCULAR ELECTROMAGNET FOR IRON REMOVAL

Air cooling type

HEM-70C

[Application]

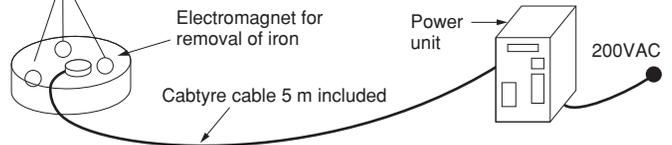

The standard suspended electromagnet designed for removing iron from above conveyors. This model is suitable for removing iron from ores and various materials (glass, ceramics, sugar, paper, chemicals, etc.) as well as from crushed stone in crushing plants and from casting sand in casting plants.

[Features]

- Light weight and compact for easy handling.
- Minimum maintenance and weather resistant.

※The electromagnet power consumption applies to the use of 200 VAC (50 Hz).

※For use in combination with a vibrator like vibration conveyor, a special type of vibration-proof specification needs to be used.

Model HEM-BS SUSPENDED ELECTROMAGNET FOR IRON REMOVAL

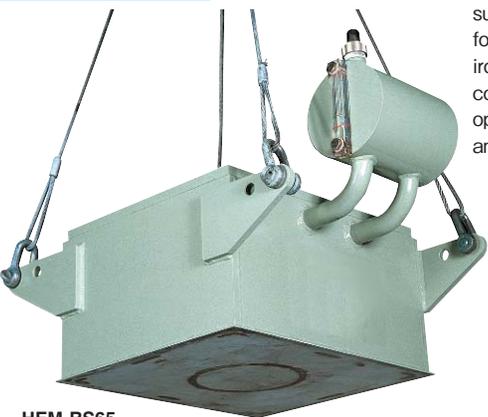

Oil cooling

[Application]

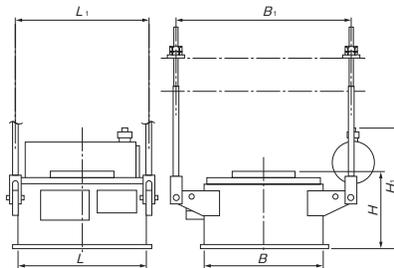

This model utilizes the electromagnet design taken from the suspended electromagnetic separator and is recommended for use where there is a relatively small amount of mixed iron pieces on the conveyor. This model is for use on large conveyors as with Model BST, but is most suitable for operations where the amount of mixed iron pieces is small and attracted iron pieces can be removed periodically.

[Features]

- There are no moving parts and the construction is simple for trouble-free operation.
- The oil cooling system can keep temperature rise below a certain level, when in a continuous use operation. (For cooling oil used, see page 126.)
- The separating capacity is about the same as Model BST.
- Magnetic separation effectiveness is high because effective magnetic field is generated all over the attractive face.
- Corresponding belt width is now wider.
