Model MFG MAGNETIC FIELD GENERATOR

(Controller)

LMT-230

[Application]

Generates a powerful magnetic field for magnetization of magnetic substances and seed magnetic field treatment in agriculture and gardening.

[Features]

- A simple configuration for installation within a floor area of less than 1 m2.
- A dedicated controller needs to be used.

Main unit

REFERENCE MAGNETIC FIELD FOR TESLA METER TM-SMF

MAGNETIC POLARITY CHECKER

How to Demagnetize and Precautions for Use

- ■Move a workpiece over the demagnetizing surface slowly in the direction of A-B. Note that the workpiece must be moved more than 20 cm away from the end of the demagnetizer to be demagnetized effectively.
- ●When the tunnel type demagnetizer is used, pass the workpiece through the tunneled hole.
- A recommended time for passing the workpiece is about 5 seconds. (Recommended speed from 3 to 5 m/min.)
- Some demagnetizers may be heated to considerably high temperature due to electromagnetic induction action, but this does not affect the demagnetizing operation at all. However, be sure to observe the working rate.
- Olf there is any other metal near the demagnetizer, it may also be heated. You should move such metal at least 5 cm away, and approx. 30 cm away for the tunnel type demagnetizer. However, if such separation is not possible, please use plastics or nonmagnetic materials such as SUS304 for peripheral machinery.
- The strong magnetic field produced by the demagnetizers may cause the CRT of computer and NC units to flicker. It will not adversely affect the operation of these units, but if it causes a recognition problem, such measures must be taken as keeping the CRT away from the demagnetizers and installing a magnetic shield on the CRT side.
- ●The demagnetizers have large inductance and low power factor. Take in fluence on the power source into consideration.
- ●The standard models can not be used on 220 VAC, 50 Hz. For such application, please contact us.
- Demagnetizing effect varies tremendously depending the conditions of work. Depending on status, in particular, of heat treatment, work of some materials is not easy to be demagnetized
- ●If work sample is provided us, we will make demagnetization effect
- **%** Also refer the Facsimile Communication Form (inquiries data) at the end of this Catalog.

Model KMD TABLE TYPE DEMAGNETIZER

Compact but improved demagnetizing performance!

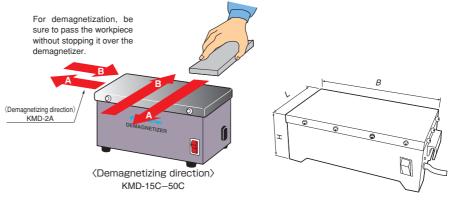

[Application]

These demagnetizers produce an alternating magnetic field on the surface by use of an AC power source through which workpieces are passed to remove the magnetism remaining on their surface.

[Features]

- Thick workpieces can be demagnetized effectively by passing the front and rear side over the demagnetizer.
- These demagnetizers are very powerful and can demagnetize steel materials such as high speed steel, bearing steel, nickel-chrome steel, spring steel, die steel, etc. which are difficult to demagnetize by standard demagnetizers (since these steels have the property similar to magnetic steel which retains residual magnetism and is hard to remove)
- ■These demagnetizers have good heat radiation and can withstand continuous power application.

KMD-50C		1.28kVA (6.4A)		380(14.9)	500 (19.6)			37kg/81 lb	

Demagnetization has been improved by implement of stronger magnetic field.

Designed for removing or reducing residual magnetism by passing affected work pieces over the demagnetizing face.

- ●Use of a new 3-phase AC power design results in a more powerful magnetizing field to effectively demagnetize difficult work material and work shapes
- Effective demagnetization of work such as ring shapes such as assembled bearing gears.

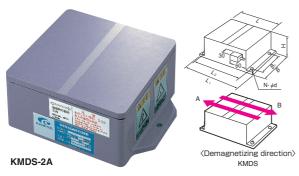

(Demagnetizing direction) ●Improved heat dissipation making continuous use possible.

WATER-PROOF TYPE DEMAGNETIZER

These demagnetizers produce a strong magnetic filed on the surface by use of an AC power source to demag-netize workpieces on a belt which runs over close to the surface.

- ■They are water-proofed and will not fail when wetted by cutting oil or cooling water.
- ●They can be incorporated in belt type grinders or other automatic and continuous
- The very strong demagnetizing force produced provides some margin on gap width on the surface to allow a belt conveyor to run over the working face.

Precautions for use

Cool them always by pouring water, 50% rated when you use them in dry area (electrifying them for 20 minutes and turning off for 20minutes.)

Model KMD-F INVERTER CONTROL TYPE DEMAGNETIZER

Less power and enhanced demagnetizing erformance!

This model is designed to generate an alternating magnetic field on the surface by an AC power source, where workpieces are passed to eliminate the magnetism remaining on the surface of workpieces.

[Features]

- Demagnetization is carried out by varying (sweeping) a frequency lower than commercial frequencies from a lower point to a higher point. This model has improved the demagnetizing performance without increasing the amount of electricity to use.
- The demagnetizing part is of the same dimensions as the conventional table type demagnetizer (KMD-C). With the same output current (AC effective value) as conventional models, the residual magnetism in workpieces (SKH material) can be reduced to one
- Workpieces are demagnetized by passing them over the demagnetizing surface at a constant speed, as with conventional
- Continuous power on specification, but heat generated in the demagnetizing part is less than conventional models.
- A demagnetizing output variable resistor is provided on the electrical unit that can vary the output current (AC effective value) in a range of 100 % and 70 %. This feature achieves demagnetization of low-carbon steels like S45C by less power (70%) than conventional models.

		(7.48)	(8.66)	(6.89)	(11.4)	(9.84)	1φ	10A	13 lb	

[Application]

Pressing the demagnetizing button completes demagnetization within a fixed time without moving workpieces.

Features]

- A magnetomotive force greater than the AC demagnetizer has been set, which works well on hard workpieces such as bearing steels and cutter steels that are difficult to demagnetize with conventional demagnetizers.
- Since workpieces are demagnetized while keeping them stationary on the demagnetizer, it is not necessary to move workpieces as when using an AC demagnetizer. Thus, this model is suitable for demag-netization of large workpieces (e.g. molds) that are difficult to
- Since demagnetization is carried out according to the attenuation pattern programmed in the power unit, electricity needs to be applied only during demagnetization, saving electricity.
- The demagnetizer itself and the power unit are installed separately. Thus, they can be installed in an easy-to-operate place.

Model KMDE-MP SINGLE POLE STATIC TYPE DEMAGNETIZER

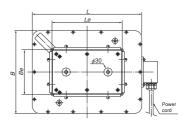

[Application

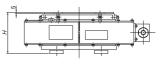

Recommended for demagnetization of thick workpieces and partial demagnetization of large workpieces.

Pressing the demagnetizing button completes demagnetization within a fixed time without moving workpieces.

[Features]

- •A strong magnetic field is generated in a wide area to make this model suitable for partial demagnetization of large workpieces and thick workpieces.
- Since demagnetization is carried out according to the attenuation pattern programmed in the power unit, electricity needs to be applied only during demagnetization, saving electricity.
- The demagnetizer itself and the power unit are installed separately. Thus, they can be installed in an easy-tooperate place.

Model KMDE-V STATIC TYPE V SHAPED DEMAGNETIZER

Static fixed position work piece demagnetization, no turning or passing!

An example of demagnetizing Main unit

Power Unit required additionally

d(VCT.34.1.25mm*)2m

[Application]

Well suited for demagnetization of ring shape work pieces. [Features]

- Demagnetizes work in a one time operation. Re-positioning of work is not necessary, reducing risk of damage to part handling.
- Protective plating is provided on the demagnetizing V-Faces, preventing damage to work surfaces. Re-positioning of the protection plating allows for support of uneven shaped parts.
- Separate power control and KMDE-V can be located separately for placement and operation near work and minimal handling.
- Water-proof or anti-water drop type are optionally available. Please contact us.

V TYPE DEMAGNETIZER

lon-vatertigh

For demagnetization of ring shape work pieces, annealed materials!

[Application]

Use to remove residual magnetism within magnetized ring shaped work.

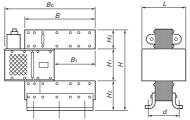

- V-shaped core design, achieves effective demagnetization of ring shaped work
- Strong magnetic field, effective for hard to demagnetize annealed material.
- A water reservoir area is provided for demagnetization of work soaked with water too.

Model KMDU U TYPE DEMAGNETIZER

[Application]

Suitable for demagnetizing bobs and die sets. This model is also recommended where long and irregular-shaped workpieces need to be demagnetized uniformly since its magnetic flux alternates vertically. Further, this model can easily be incorporated in a transportation system.

 Easy incorporation into a transportation system and easy removal and relocation.

Model KMDT **TUNNEL TYPE DEMAGNETIZER**

[Application]

These demagnetizers can meet such demagnetizing needs as passing a bucket containing a large number of small workpieces and being incorporated in a line for continuous demagnetizing by conveyor transportation.

Various sizes are available to meet such requirements. They can also be used to demagnetize long workpieces and irregularly shaped workpieces.

[Features]

- The good heat radiation design enables continuous operation.
- A uniform demagnetizing area can be obtained.
- Almost uniform demagnetization can act on the whole periphery of passing workpieces.

An example of application of KMDT

Caution: The conveyor must be made of nonmagnetic stainless steel or plastic. KMDT-10A

Model KMDT TYPE DEMAGNETIZER TUNNE

[Application]

This model allows large and heavy workpieces to pass through the demagnetizing area at a nearly constant speed, though manual feed, on a roller conveyor. No extra manpower is required for repeating work, enhancing the demagnetizing efficiency.

Model KMDP PEN TYPE DEMAGNETIZER

[Application]

Recommended where magnetism on the surface of metallic workpieces in general need to be reduced in a limited area or locally.

This is useful to completely eliminate weak magnetism that remains locally in jigs and workpieces after they have been demagnetized by a large demagnetizer. It is also suitable for demagnetizing cutters of machines and punches and guide pins of press dies while they are mounted.

- A rare earth magnet having strong magnetic force is used at the end of the rotary magnetic field.
- Re-chargeable battery operation. Power can also be supplied by the included AC adapter.
- Handy, maintenance free design with compact style and long life use.
- Environment friendly nickel hydrogen rechargeable battery included.

		[mm
Model	Battery	Mass
KMDP-16A	2,4V2000mAh	0.3kg

**AC adapter (input AC100V 50/60Hz, output DC2.7V 0.5A code length 1.9m) is provided as standard accessory

Model KMDH HANDY TYPE DEMAGNETIZER

Suitable for demagnetizing tools such as drills, cutting tools, cutters and magnetized slide calipers. They can also be used for demagnetizing a part of large steel plates.

[Features]

Compact and handy.

Mandat	De	Source	Working	Demagnetizing		Mann		
Model	Power Source	Capacity	Rate	Width	Width	Length	Height	Mass
KMDH-5A	Single-phase 100 VAC 50/60Hz	70VA	70% ED	50 (1.96)	86 (3,38)	102	119 (4.68)	2.3kg/ 5.1 lb

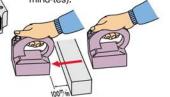

※The height is up to the grip.

※2m cord is provided.

※A different-voltage type (special type) is also available.

How to use

- The demagnetizer is turned on while the pushbutton switch is held pressed and turned off when you release it.
- The button must be pressed on during demagnetizing operation.
- Turn it off when the demagnetizer is more than 100 mm away from the demagnetizing work.
- Working rate: 70 % ED (power on for 7 minutes and pausing for 3 minutes)

Model KMDC TOOL DEMAGNETIZER

onatertight

For demagnetization of magnetized tools such as drills, reamers and cutters and measuring equipment!

[Application]

Easy demagnetization of a wide variety of magnetized objects including tools such as drills, milling cutters, reamers and cutters, round workpieces and measuring equipment.

[Features]

- Small and light weight for easy operation.
- Capable of removing small chips attracted by magnetism on drills and reamers while such tools are being mounted on machines.

How to use

- Power is applied only while the pushbutton is held for demagnetization.
- Turn off (release the push-button) the demagnetizer after moving it away more than 100 mm from an object demagnetized.
- If the demagnetizer is turned on frequently, the body temperature rises. If the temperature rises too high, it is indicated by an overheat alarm seal. Stop using it for a while.

Model	Power Source	Source Capacity		Demagnetizing Dia	Mass
KMDC-40	Single-phase 100 VAC 50/60Hz		Momentary power on bypushbutton	1000	0.9kg/2 lb

«Cord length 2.5 m (curled cord) included.
